No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 68, Sequence 11, Sequence 1, A

Tig gamma-1 chain C region - human C;Species: Homo sapiens (man) C;Species: Homo sapiens (man) C;Species: Homo sapiens (man) C;Date: 31-Jan-1981 #sequence. Said Results Sides (man) Species: Homo Sides Sid

A; Molecule type: DNA A; Residues: 1-330 <ELL>

A;Cross-references: UNIPROT:P01857; UNIPARC:UP10000034COE; EMBL:217370 A;Note: this sequence has the Glm(17) allotypic marker, 97-Lys, and the Glm(1) markers, A;Note: Lys-330 is removed after translation

RiHarris, L.J.

Submitted to the EMBL Data Library, October 1992

A;Reference number: S33904

A;Accession: S3861

A;Molecule type: DNA

A;Residues: 2-330 c4ARA

A;Cross-references: UNIPARC:UPIO00013C6FE; EMBL:Z17370

A, Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain a, Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 cc A, Note: the sequence of residues 42-76 was taken from the reference that follows R, Michaelsen, T.E.; Frangione, B.; Franklin, E.C.

Ig gamma-2 chain C region - hu C;Species: Homo sapiens (man)

G2HD

```
Ig gamma chain C region - rabbit
Cispecies: Oxyctolagus cuniculus (domestic rabbit)
Cjate: 24-Apr-1984 #sequence_revision 15-Nov-1984 #text_change 09-Jul-2004
CjAccession: A91749; A90290; A33928; A90245; A94416; A02Ī61
R;Bernstein, K.E.; Alexander, C.B.; Mage, R.G.
Rmunogenerics 18, 387-397, 1981
A;Title: Nucleotide sequence of a rabbit IgG heavy chain from the recombinant F-I haplo.
A;Reference number: A91749; MUID:84030930; PMID:6313520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; Molecule type: mRNA
